10 Ways Teachers Can Save Time with AI

This guide is designed for colleagues who would like practical ideas for classroom use. The focus is on saving time, improving accessibility and reducing workload whilst keeping teachers firmly in control.

1. Create glossaries in minutes

Generate topic-specific vocabulary lists with pupil-friendly definitions.

2. Build knowledge organisers quickly

Produce structured one-page revision resources for almost any topic.

3. Improve accessibility

Simplify instructions, adapt reading age and create scaffolded resources.

4. Support EAL learners

Translate materials and convert text into a wide range of languages and styles.

5. Create hinge questions

Generate colour-card hinge questions that align with HGS response cards.

6. Produce catch-up work

Create structured independent work for pupils who missed lessons.

7. Generate revision resources

Create retrieval activities, true/false checks and summary materials.

8. Draft parental communication

Adapt information into clear, professional parent-friendly language.

9. Create WAGOLLS

Generate model answers and examples for pupils to analyse.

10. Reduce admin time

Create referral work, cover work and routine classroom materials more efficiently.

Making AI Work Well at Hutton

Start Small

Choose one utility that solves a genuine problem. You could begin with the Glossary Generator, Knowledge Organiser Generator or Translation & Style Converter.

The 80/20 Rule

AI should create a useful first draft. Teachers provide the professional judgement, subject expertise and final quality assurance.

Protecting Data

Never enter identifiable pupil information into public AI systems. Use anonymised descriptions instead. For sensitive school work, Copilot within the school Microsoft account is generally the safest option.

Checking Quality

Always review AI-generated content before sharing it with pupils. Check accuracy, appropriateness and curriculum alignment.

Building Confidence

You do not need to be an AI expert. Most utilities follow the same workflow: complete a form, generate a prompt, paste it into ChatGPT or Copilot, then paste the response back into the utility.

Recommended First Utilities

Glossary Generator, Knowledge Organiser Generator, Hinge Question Generator, Catch-Up Work Generator and Translation & Style Converter.

Remember

The goal is not to replace teacher expertise. The goal is to free up time for the aspects of teaching that matter most: planning learning, building relationships and supporting pupils.
