

Hutton Grammar School

AI Utilities Hub – Quick Start Guide

Getting Started (First-Time Setup)

- 1 Sync the Teaching and Learning OneDrive folder with your local device.
- 2 Open the AI Hub subfolder in File Explorer. Click the 'Hutton AI Utilities Hub' link to launch the utilities.
- 3 Alternatively, EASIEST TO START WITH, copy the folder into your own user area or subject area. This works well but future updates will not arrive automatically.
- 4 Bookmark the Hub page for quick future access.

The Simple 3-Step Workflow

1. Complete a short form in the utility.
2. Generate a prompt and paste it into ChatGPT or Copilot.
3. Paste the AI response back into the utility to create the finished resource.

Good Places to Start

- 1 Glossary Generator – quick vocabulary resources.
- 2 Knowledge Organiser Generator – one-page revision resources.
- 3 Hinge Question Generator – colour-card assessment questions.
- 4 Translation & Style Converter – accessibility, parental communication and language support.

For Less Confident Users

You do not need to be an AI expert. Start with one small task. Most utilities follow exactly the same process and are designed to save time rather than create extra work. You cannot damage the utilities by experimenting with them.

Safe & Responsible AI Use

1. Follow the 80/20 rule: AI creates a first draft; teachers provide professional judgement and quality assurance.
2. Never enter identifiable pupil data into public AI systems.
3. Use anonymised descriptions when discussing pupils.
4. At Hutton, Copilot within the school Microsoft account is generally the safest option for sensitive school work.
5. Review all AI-generated content before using it with pupils.
6. Use AI thoughtfully and critically; the teacher remains the expert.
